PUBLIC NOTICE

LIMITS OF JURISDICTION

TO WHOM IT MAY CONCERN:

The purpose of this notice is to list those waters within Louisville District which are subject to the Corps of Engineers jurisdiction under Section 10 of the rivers and harbors Act of 1899 (33 U.S.C. 403).

In other words, anyone intending to perform work in the immediate vicinity of the waters listed below must first receive a permit from this office. The regulations establishing procedures for processing applications for such permits were published in the Federal Register on 22 July 1982 (33 C.F.R. 320 through 330).

Routine permit applications take about sixty days to process. More complicated or controversial applications may take considerably longer. Therefore, potential applicants should contact the Louisville District office at the above address well in advance of the date they intend to begin work.

One further very important point must be noted: the Corps of Engineers also has regulatory responsibilities under Section 404 of the Clean Water Act (33 U.S.C. 1344). That law requires a permit only for the discharge of dredged or fill material below the Ordinary High Water elevation of a waterway. However, the area of our jurisdiction under this Act is much more extensive than that under the 1899 Act. In fact, it extends to all waters of the United States. For this reason, and since many types of work under both sections of law have been authorized by nationwide and regional general permits, we strongly suggest that anyone proposing any work in any water contact this office.

The only work within navigable waters not normally requiring a permit from the Corps of Engineers is the construction of bridges, causeways, and aerial pipeline crossings. Such facilities are under the jurisdiction of the Department of Transportation. Further information on the requirements for permits for such activities may be obtained from the Commander, Second Coast Guard District, 1430 Olive Street, St. Louis, Missouri, 63103. However, if any of the work requires the discharge of dredged or fill material into the waterbody, an authorization is still required from the Corps of Engineers.

Fees:

Fees are required for permit applications under Section 404 of the Clean Water Act and Section 9 and 10 of the Rivers and Harbors Act of 1899. A fee of \$100.00 will be charged when the planned or ultimate purpose of the project is commercial or industrial in nature and is in support of operations that charge for the production, distribution, or sale of goods or services. A \$10.00 fee will be charged for permit applications when the work is non-commercial in nature and provides personal benefits that have no

connection with a commercial enterprise. The final decision as to basis for fee (commercial vs. non-commercial) shall be solely the responsibility of the District Engineer. No fee will be charged if the applicant withdraws the application at any time prior to issuance of the permit and/or if the application is denied. Collection of the fee is deferred until the applicant is notified by the District Engineer that a public interest review has been completed and that the proposed activity has been determined to be in the public interest. Any modification significant enough to require a public notice will also require a fee. No fee will be assessed when a permit is transferred from one property owner to another. No fees will be charged for time extensions or general permits.

Unauthorized Work:

All work performed without the required Department of the Army Permit will be immediately investigated and evaluated. Based on results of the investigation, the case may be forwarded to the appropriate U.S. Attorney or higher Corps of Engineers authority recommending that appropriate civil or criminal action be taken. Applications for approval of unauthorized work will not be accepted until litigation has been completed, or until a determination has been made that prosecution is not warranted.

Disposal of Refuse:

The Corps of Engineers is also responsible for enforcement of Section 13 of the Rivers and Harbors Act of 1899 (33 U.S.C. 407). This section of the law prohibits placing, or causing to be placed, into navigable waters, or in a location or manner as to be liable to be washed into navigable waters, anything which might become a hazard to navigation or anchorage. It should be noted that no permits are issued for this type of activity. Violations of this section of law will be reported to the Department of Justice for appropriate action.

The Louisville District Corps of Engineers is presently engaged in determining the extent of the jurisdiction to be exercised over those "Navigable Waters of the United States" located within this District. This review and determination is being made in accordance with Part 329 of Corps of Engineers' regulations as published in the July 22, 1982 Federal Register, Part II, Volume 47, No. 141, pp. 31828 - 31831. Until this review and determination has been completed and approved by the Chief of Engineers as provided by this regulation, the following list of streams and waterbodies within the Louisville District Boundaries are considered navigable waters of the United States to the jurisdictional limits shown. The Limits of Jurisdiction shown below supersede the limits designated by all previous Public Notices published by this District addressing the topic of jurisdiction. Changes and/or additions to this list, or to the jurisdictional limits shown, will be made as our review progresses. All activity as described above and within the jurisdictional limits set forth below will require a permit.

All embayments or backwater areas on all tributaries to streams listed above are considered navigable for administrative purposes. If anyone is now contemplating work or activity on a waterway, whether or not such waterway is listed above, or whether such proposed work or activity is above the jurisdictional limit shown above on a listed waterbody, it is suggested that this Office be contacted prior to commencement of such work or activity. Such contact may prevent a subsequent determination that such work or activity is illegal based upon a final determination of navigability.

As mentioned before, the above listed stream limits define where permits are required, for work or construction, under Section 10 of the River and Harbor Act of 1899. The Corps of Engineers also has permitting jurisdiction pursuant to Section 404 of the Clean Water Act for all waters of the United States. Section 404 regulates the placement of dredged or fill material into streams and their adjacent wetland areas. Therefore, should you anticipate placing material into any streams, lakes or wetland located within the boundary shown on the attached map, then you should contact the Louisville District in order to determine the authorization required prior to the placement of the dredged or fill material.

Questions pertaining to the Department of the Army permit program may be directed to the Louisville District Office by calling (502) 315-6733 or (502) 315-6686, or by writing:
